As I took my seat on the plane, I was struck by a rather uncanny feeling about the stranger next to me. Hoping not to draw attention to my curiosity, I sneaked a (19)_____ glance at his face while (20)_____ in my bag for my phone. Immediately, I realised what was so unsettling about him: he had my nose, my eyes, even my bone structure. To all intents and purposes, he was me, (21)_____ a slightly scruffier version, like a vision of what I might become should I (22)_____ to a greater extent than I already do. Doppelgangers – people who look (23)_____ similar to others – have long been a source of fascination and terror, as if representing a peek into parallel universes. Historically, they were seen as harbingers of doom, as if meeting yourself might bring about a terrible catastrophe. Of course, (24)_____ logic tells us there are finite variations of a human face, so occasionally we're bound to stumble across others with more than a (25)_____ resemblance to ourselves. But try as we might to put a rational (26)_____ on things, coming face to face with your own doppelganger can still challenge your sense of self-identity to the very core.

As urbanization accelerates, one of the most pressing questions for psychologists is whether a lack of exposure to “green space” fundamentally alters human cognitive development. This inquiry has fascinated urban planners, ecologists, and neurologists for decades.

At present, we still lack a **definitive** answer, but empirical research has begun to shed light on the “biophilia hypothesis.” The theory suggests that humans possess an innate tendency to seek connections with nature. Early researchers discovered awkward disparities in stress recovery rates between patients with a view of trees and those facing a brick wall. They found neurological responses never seen in controlled indoor environments, such as specific patterns of “involuntary attention” triggered by **natural fractals**. Not surprisingly, some scientists concluded that such immersion has a profound effect on the resilience of the human mind. Researcher Richard Louv famously wrote: “**The future will belong to the nature-smart** – those individuals, families, businesses, and political leaders who develop a deeper understanding of the nature-human connection.”

For years, city life was viewed merely as a trade-off for economic opportunity. Now, it is suggested that the urban environment might be perceived as a sensory “bottleneck” for the brain. A useful way of testing Louv’s claims focuses on cognitive restoration. Cognitive energy distributes continuously, but it is perceived categorically. Interestingly, the ability to focus after nature walks is far greater than after urban walks. Moreover, this difference exists regardless of the duration of the walk. For instance, children in high-density urban areas often exhibit higher rates of attention fatigue, whereas those with access to community parks show significantly lower stress markers. Researchers found that urban residents are able to navigate complex grids **despite perceiving them as monotonous**. They also found that people recover faster from mental fatigue when exposed to “soft fascinations” like moving leaves or clouds. Because natural environments frame sensory input in restorative ways, people living in greener areas are expected to function more efficiently regarding complex tasks.

27. What is the purpose of paragraph 1?

- A. To advance a topic

- D. To portray the effect of urban living on the mind

31. Which of the following is the organization of paragraph 3?

- A. It starts with a review of the relationship between cities and the mind, then a current research report, and comes to a conclusion.
- B. It starts with different views on urban life, then a test on cognitive restoration, and concludes with the influence of this restoration.
- C. It starts with a debate on the influence of nature on thoughts, then a brief research report, and comes to a conclusion.
- D. It starts with the importance of parks, then examples of certain cities, and concludes with their relationship.

32. According to paragraph 3, what is true about cognitive restoration?

- A. It is subject to the duration of the activity.
- B. It is in accordance with categories of sensory input.
- C. It is diverse among different socioeconomic groups.
- D. It is independent of the complexity of the urban grid.

33. Which of the following is the phrase “despite perceiving them as monotonous” in paragraph 3 closest in meaning to?

- A. though the surroundings appear repetitive
- B. though they carry synonymous labels
- C. despite sorting them into the same cluster
- D. despite calling them interchangeably

34. Which of the following statements does the author most agree with?

- A. Urbanization is expected to affect perception by means of framing concepts.
- B. The way natural environments frame sensory input restores human perception.
- C. Human perception exerts an unexpected impact on urban planning.
- D. The relationship between nature and cognitive health is not reciprocal.
